

Green. The Color of Innovation.

Vitesse's Design Engineers are building energy-efficient technologies directly into Ethernet network equipment to deliver energy savings and cost efficiency to end-users.

Delivering green power savings equivalent to well over 400mW per port, all three of Vitesse's Ethernet IC product families are enhanced with two advanced, energy savings technologies that assist eco-conscious Enterprise, small-medium business and service providers who are looking for ways to reduce their energy consumption. These technologies have been designated by Vitesse as EcoEthernet™ solutions and are known industry-wide as ActiPHY™ and PerfectReach™.

Both of these features can be activated in all SimpliPHY™, SparX™, and G-RocX™ IC devices currently in production via an eco-friendly software upgrade.

Together, we can make green the color of your networking innovation.

Three Products that Define the Eco Category:

- SimpliPHY™
- SparX™
- G-RocX™

Key Applications:

- Consumer Electronics with Ethernet Ports
- SMB/SME Switches/Routers
- Enterprise IT Office Equipment

VITESSE®

Making Next-Generation Networks a Reality.
